

Make the move from reactive maintenance to preventive maintenance.

Do you know when to remove snow from your roof?

With Tensio, the answer is at your fingertips.

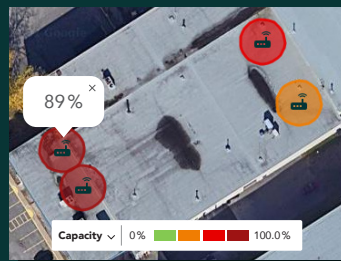

Snow removal based on visual clues can be risky and expensive. Our platform gives you real-time access to the actual snow load on your roof, becoming the best decision tool to optimize your maintenance operations in winter.

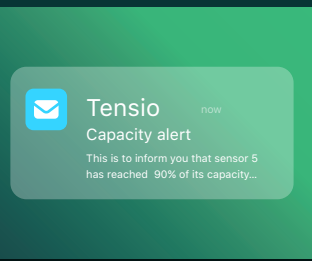

How does it work?

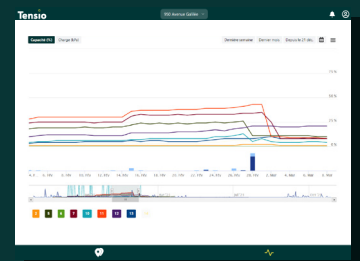

Tensio installs sensors directly onto the building structure.

Operators log into the Web app to see live and historical data.

Alerts are sent automatically when critical loading is reached.

Our algorithms provide a 7-day forecast to plan ahead of time.

This winter, remove snow at the right time and avoid unnecessary operations.
